(54) DETERGENT COMPOSITION FOR DRY CLEANING

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain a detergent composition excellent in low-temperature solution stability, deterging performances, and water catching performances by adding an alkyl- or alkenyl-benzenesulfonate salt to a composition based on a dialkyl sulfosuccinate and a non-alkylphenol ethoxylate type nonionic surfactant.

SOLUTION: The detergent composition is prepared by adding an alkyl- or alkenyl-benzenesulfonate salt having at least one 1-15C alkyl or alkenyl group to a composition based on a dialkyl sulfosuccinate (salt) represented by the formula and a non-alkylphenol ethoxylate type nonionic surfactant, desirably, a polyoxyalkylene alkyl or alkenyl ether prepared by the addition reaction of an 8-18C primary or secondary alcohol with 1-14 mol, on the average, of ethylene oxide and/or propylene oxide. In the formula, R1 and R2 are each a 6-18C alkyl or alkenyl; and M is H, an alkali (alkaline earth) metal, or an alkanolamine.
